-

Project Supervisor: Mr. Mridul Dixit

Objective: To develop an E-learning platform that provides easy access to study materials, video lectures, and assessments anytime and anywhere. The system ensures a user-friendly, flexible, and interactive learning experience for both students and teachers, with smooth navigation and efficient content management.

Tools required:

➤ **Hardware Requirements:**

- Computer/Laptop
- Smartphone (optional for access)
- Internet connection (Wi-Fi or mobile data)
- Processor: Minimum Dual Core
- RAM: 4 GB or above
- Storage: 500 MB free space
- Display screen (monitor)
- Keyboard and mouse

➤ **Software Requirements:**

- Computer/Laptop
- Smartphone (optional for access)
- Internet connection (Wi-Fi or mobile data)
- Processor: Minimum Dual Core
- RAM: 4 GB or above
- Storage: 500 MB free space
- Display screen (monitor)
- Keyboard and mouse

Abstract: An E-learning platform is a web-based system that enables students and teachers to connect digitally for effective learning. It allows users to access study materials, video lectures, quizzes, and assignments anytime and from anywhere. The

platform provides a flexible and user-friendly environment where students can learn at their own pace, while teachers can easily manage and share content.

The system includes features like user authentication, course management, progress tracking, and interactive communication. It enhances the learning experience by making education more accessible, organised, and efficient through the use of modern technology.

Outcome:
